KYMINASI PLANTS Crop Booster

The KYMINASI PLANTS technology, based on biophysics, uses natural frequencies to give plants the necessary stimulation that they need to grow stronger, faster, healthier, tastier and more nutritious.

- Increased yield & production cycles
- Reduction in crop inputs required
- Improved ability to photosynthesise
- Greater absorption of nutrients and water
- Reduction in water requirements
- Improved resistance to pests and disease
- Longer storage/shelf life

Together with Crop Booster we will achieve; a quick return on investment, efficiency gains and, a more sustainable future.

Our Vision

"To empower businesses to grow by using the latest technology."

Agriculture and Horticulture

As a technology specialist, First Base Solutions carefully select innovative technologies, software and services for farmers and growers.

We provide a range of products and service that are helping, in different ways, with the current challenges in farming and food production. We'd like to explore how these products and services can be tailored to address the issues of specific importance to you.

"We have much better visibility of our staff costs for harvesting and packing, which has helped us plan more effectively day to day." Thane Goodrich Intercrop

Probably the most dedicated sector we work with, the fresh produce industry is 24/7. They need to service their clients at any time of the day, and they need services for every hour of the day. We are one of the few IT solutions providers that offer a truly 24/7 customer care service. Our thought process is that technology doesn't work to a nine-to-five workday, so neither should we.

"We would highly recommend First Base Solutions because of their good back up support and employees who care about your business." Walsh Mushrooms
